

GRAIN WEATHER RISK PROTECTION

GRAIN WEATHER CERTIFICATE

Grain Brokers Australia are offering Weather Certificates again this year to protect crop production for 2020 growing season.

A Grain Weather Certificate allows you to establish your weather risk versus grain crop investment relative to the growing season on your crops.

Protect your grain income against weather conditions such as:

- Dry Emergence
 - Wet Season
 - Frost
 - Wet Harvest
 - High Temperature (Spring)
- Weather Certificates can be taken 20 days out from the period of time to cover
 - Weather measured by BOM i.e. rainfall and temperature, using a 5km x 5km BOM grid over your property/'s
 - Automatic trigger of certificates from the BOM weather data, no need to claim
 - Flexibility to set your own value to cover, premium and own weather parameters

Cover relative to the start of the season

- Emergence cover which is made up of a wet germination period and then a longer risk period for a dry season component.
- Emergence Plus cover which is made up of dry season over germination which triggers a dry season over spring.
